Reviews

This type of publication is every thing and helped me seeking ahead and much more. It usually fails to charge too much. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Juliet Mertz)

ELECTRIC POWER PLANT ENGINEERING

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 124 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: . . . earth, it was made to pass through the winding of an electromagnet, which then excited a strong magnetic field about the gap, with the result that the arc was immediately blown out. With direct-current this type of device is now used almost exclusively. The gap is in series with a resistance of low inductance. By providing a direct path for the discharge the possibility of short-circuit in the box in which the device is enclosed is reduced to a minimum when the discharges are especially severe. The connections to d. c. converters and feeders are shown in Figs. 1, 5, 12, 13, and 34. When the device is installed on the line it is usually enclosed in a wooden box supported on the poles carrying the transmission line. This type is used for voltages up to 6, 000. A spark-gap on top of the porcelain casing is used to adjust for voltage. Electrolytic Lightning Arresters. --(a) Aluminum devices. The construction of the aluminum type of arrester is based on the following principles: If an aluminum plate and another plate of some other metal be immersed in a suitable electrolyte, the resulting cell will have the property of passing current in practically only one direction. Only a very small fraction of the current is passed in the opposite direction until the applied voltage reaches a certain value. After this limit has been exceeded, however, the current rises much more rapidly with respect to the e. m. f....
